JUNE 23~27, SEOUL, KOREA

# Open Access Databases in Molecular Imaging (or how to access more than 30.000 scans!)

Martin Norgaard

University of Copenhagen, Denmark  
National Institute of Mental Health, USA

I have no disclosures

## Low 5-HT<sub>1B</sub> receptor binding in the migraine brain: A PET study

Marie Deen<sup>1,2,3</sup>, Hanne D Hansen<sup>2</sup>, Anders Hougaard<sup>1</sup>, Sofi da Cunha-Bang<sup>2,3</sup>, Martin Nørgaard<sup>2</sup>, Claus Svarer<sup>2</sup>, Sune H Keller<sup>4</sup>, Carsten Thomsen<sup>5</sup>, Messoud Ashina<sup>1,3,\*</sup> and Gitte M Knudsen<sup>2,3,\*</sup>

## Psychedelic effects of psilocybin correlate with serotonin 2A receptor occupancy and plasma psilocin levels

Martin K. Madsen<sup>1,2</sup>, Patrick M. Fisher<sup>1</sup>, Daniel Burmester<sup>1,2</sup>, Agnete Dyssegaard<sup>1</sup>, Dea S. Stenbaek<sup>1</sup>, Sara Kristiansen<sup>1</sup>, Sys S. Johansen<sup>3</sup>, Sczabolz Lehel<sup>4</sup>, Kristian Linnet<sup>5</sup>, Claus Svarer<sup>1</sup>, David Erritzoe<sup>6</sup>, Brice Ozenne<sup>1,6</sup> and Gitte M. Knudsen<sup>1,2</sup>

## PET/MRI in cancer patients: first experiences and vision from Copenhagen

Andreas Kjær · Annika Loft · Ian Law · Anne Kiil Berthelsen · Lise Borgwardt · Johan Löfgren · Camilla Bardram Johnbeck · Adam Espe Hansen · Sune Keller · Søren Holm · Liselotte Højgaard

## Seasonal difference in brain serotonin transporter binding predicts symptom severity in patients with seasonal affective disorder

Brenda Mc Mahon,<sup>1,2</sup> Sofie B. Andersen,<sup>1</sup> Martin K. Madsen,<sup>1</sup> Liv V. Hjordt,<sup>1,2</sup> Ida Hageman,<sup>3</sup> Henrik Dam,<sup>3</sup> Claus Svarer,<sup>1</sup> Sofi da Cunha-Bang,<sup>1,2</sup> William Baaré,<sup>4</sup> Jacob Madsen,<sup>5</sup> Lis Hasholt,<sup>6</sup> Klaus Holst,<sup>2,7</sup> Vibe G. Frokjaer<sup>1</sup> and Gitte M. Knudsen<sup>1,2</sup>

# Introduction

- ❑ Molecular imaging is expensive and causes exposure of ionizing radiation
- ❑ Many molecular imaging studies have low sample sizes
- ❑ This directly affects the quality and impact of molecular imaging studies
- ❑ The solution is data sharing and open access databases

# The Shift Towards Open Science

2010: The year data sharing broke in neuroimaging

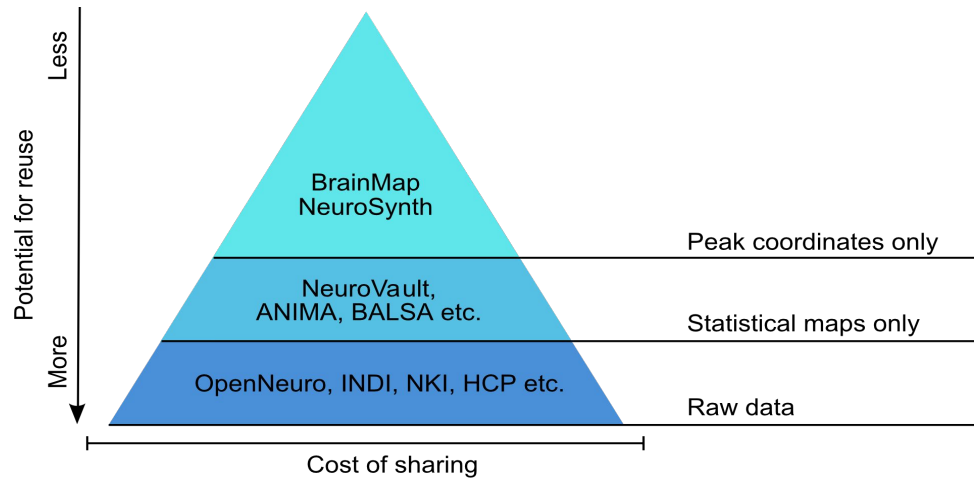

## Toward discovery science of human brain function

Bharat B. Biswal<sup>a</sup>, Maarten Mennes<sup>b</sup>, Xi-Nian Zuo<sup>b</sup>, Suril Gohel<sup>a</sup>, Clare Kelly<sup>b</sup>, Steve M. Smith<sup>c</sup>, Christian F. Beckmann<sup>c</sup>, Jonathan S. Adelstein<sup>b</sup>, Randy L. Buckner<sup>d</sup>, Stan Colcombe<sup>e</sup>, Anne-Marie Dogonowski<sup>f</sup>, Monique Ernst<sup>g</sup>, Damien Fair<sup>h</sup>, Michelle Hampson<sup>i</sup>, Matthew J. Hoptman<sup>j</sup>, James S. Hyde<sup>k</sup>, Vesa J. Kiviniemi<sup>l</sup>, Rolf Kötter<sup>m</sup>, Shi-Jiang Li<sup>n</sup>, Ching-Po Lin<sup>o</sup>, Mark J. Lowe<sup>p</sup>, Clare Mackay<sup>c</sup>, David J. Madden<sup>q</sup>, Kristoffer H. Madsen<sup>f</sup>, Daniel S. Margulies<sup>r</sup>, Helen S. Mayberg<sup>s</sup>, Katie McMahon<sup>t</sup>, Christopher S. Monk<sup>u</sup>, Stewart H. Mostofsky<sup>v</sup>, Bonnie J. Nagel<sup>w</sup>, James J. Pekar<sup>x</sup>, Scott J. Xavier Castellanos<sup>b,j</sup>, and Michael P. Milham<sup>b,1</sup>

- Comprehensive mapping of the functional connectome, and its subsequent exploitation to discern genetic influences and brain–behavior relationships, will require multicenter collaborative datasets. Here we initiate this endeavor by gathering R-fMRI data from 1,414 volunteers collected independently at 35 international centers. We demonstrate a universal architecture of positive and negative functional connections, as well as consistent loci of inter-individual variability. ...

# Data sharing is becoming the norm in neuroimaging

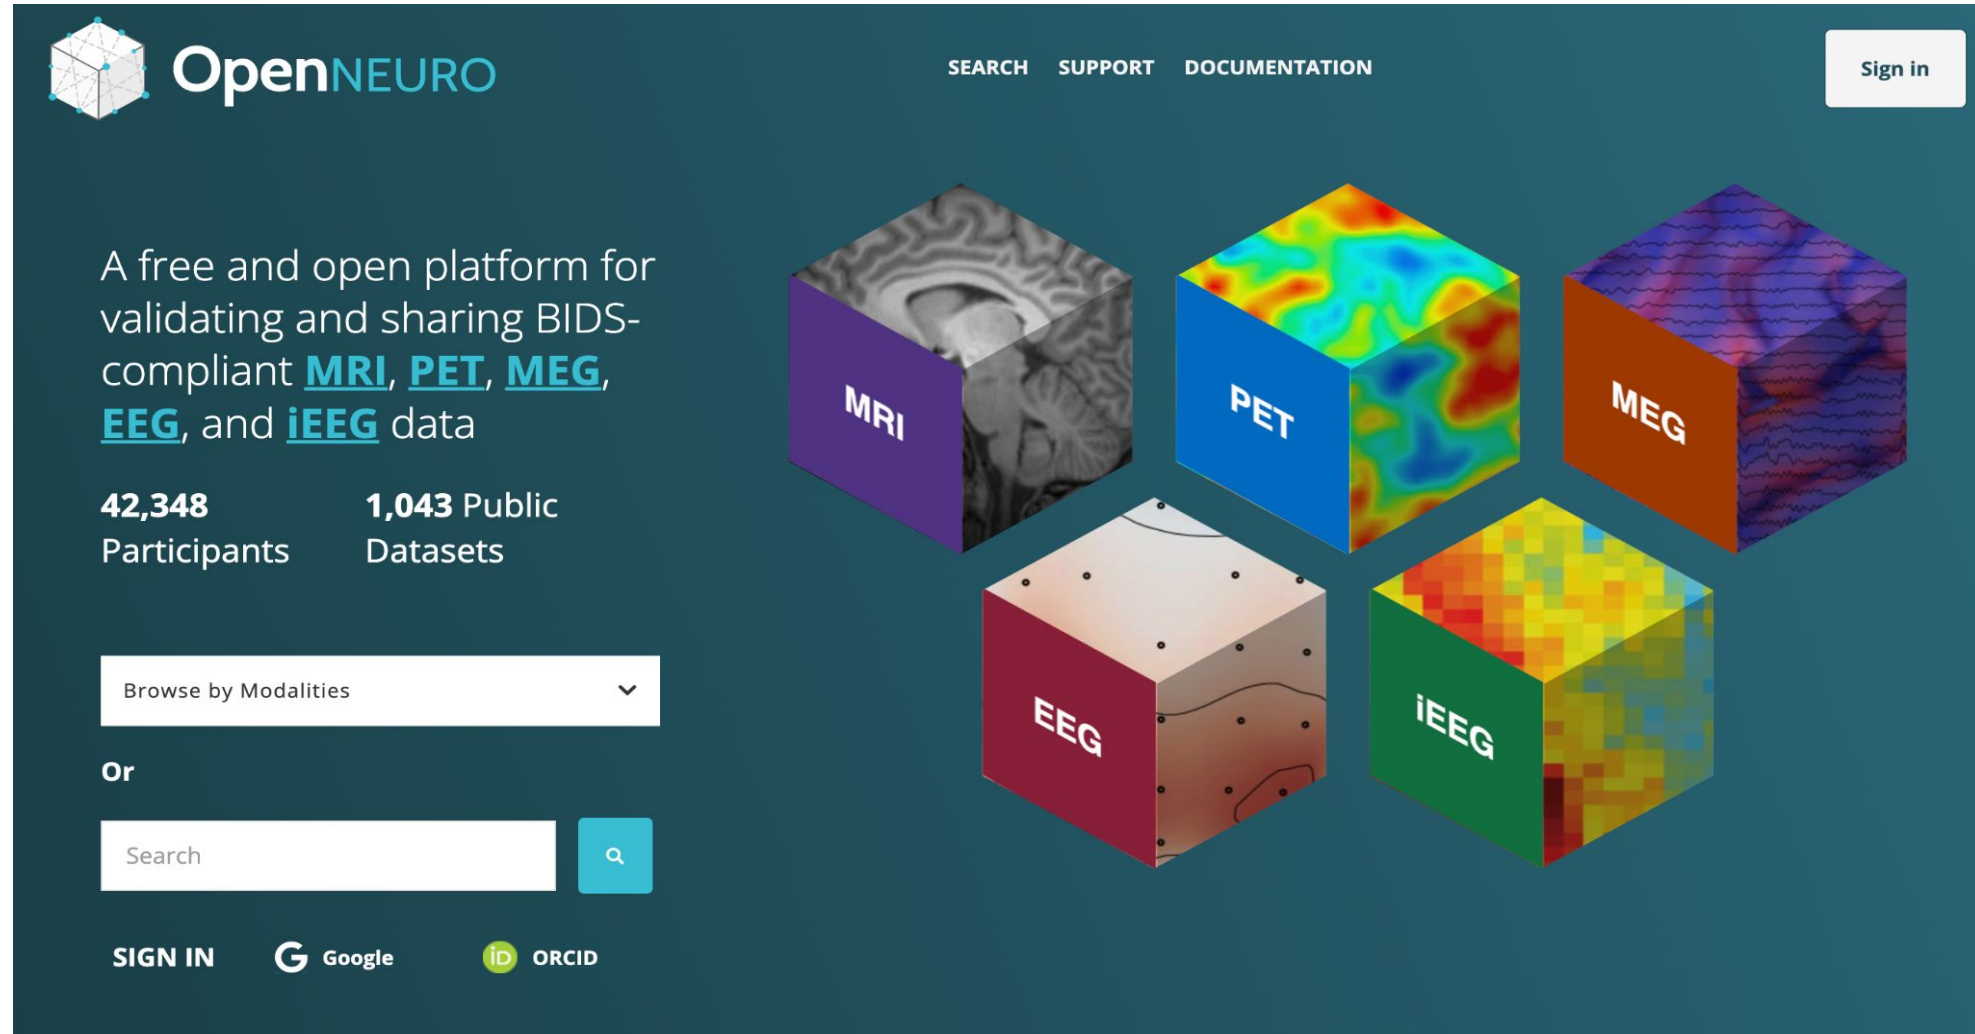

Poldrack et al., *Annual Reviews in Biomedical Data Science*, 2019

Milham et al., *Nature Communications*, 2018

Anonymous senior researcher circa 2019:  
“OHBM has been taken over by the open science zealots!”

# OpenNeuro: Sharing raw and processed imaging data

The screenshot shows the OpenNeuro website interface. At the top left is the OpenNeuro logo, which consists of a stylized cube made of dots and lines. To the right of the logo is the text "OpenNEURO". Further right are links for "SEARCH", "SUPPORT", and "DOCUMENTATION". In the top right corner is a "Sign in" button. Below the logo, there is a paragraph: "A free and open platform for validating and sharing BIDS-compliant [MRI](#), [PET](#), [MEG](#), [EEG](#), and [iEEG](#) data". Below this paragraph are two statistics: "42,348 Participants" and "1,043 Public Datasets". There is a search bar with the placeholder text "Browse by Modalities" and a dropdown arrow. Below the search bar is the word "Or" and another search bar with the placeholder text "Search" and a magnifying glass icon. At the bottom left are links for "SIGN IN", "Google", and "ORCID". In the center of the page are five 3D cubes representing different imaging modalities: MRI (purple), PET (blue), MEG (orange), EEG (red), and iEEG (green). Each cube has a corresponding brain image or heatmap on its top face.

# OpenNeuro PET

The PET portal of OpenNeuro is supported by a collaboration between Stanford University, NIH, MGH and the Neurobiology Research Unit (NRU) at Copenhagen University Hospital through the [OpenNeuroPET project](#). The project is funded through the BRAIN Initiative and the Novo Nordisk Foundation. Besides developing data sharing, the OpenNeuroPET project also aims at developing user friendly tools for the BIDS based data curation of PET data as well as tools for automated QC and template building.

README

This dataset was gathered between 2017 and 2018 for as part of the "First-in-human evaluation of [ 11 C]PS13, a novel PET radioligand, to quantify cyclooxygenase-1 in the brain". This dataset consists of 16 subjects and their imaging data, including blood data.

For more details about the paper, authors, or dataset see the attached dataset\_description.json or the participants.tsv.

## Disclaimer

As data sharing practices are steeply increasing, we need the help of the scientific community to keep this table up-to-date. We encourage all readers to further contribute to this table with their own or other relevant datasets.

Please compile [this module](#) to add a dataset to the table. We will regularly update the tables.

## Application for Access to Cimbi Database

Date/Version

1. Applicant's name

2. Position and affiliation

3. Address

4. Tel  
Email

5. Project title

6. Short project description (Background, Aims, Hypothesis, Subjects and Methods, Data analysis)

7. Specific request from Cimbi Database (Detailed description of subjects and variables)

8. Proposed contribution to Cimbi Database

9. Time schedule for project

# Practical Examples - molecular atlases

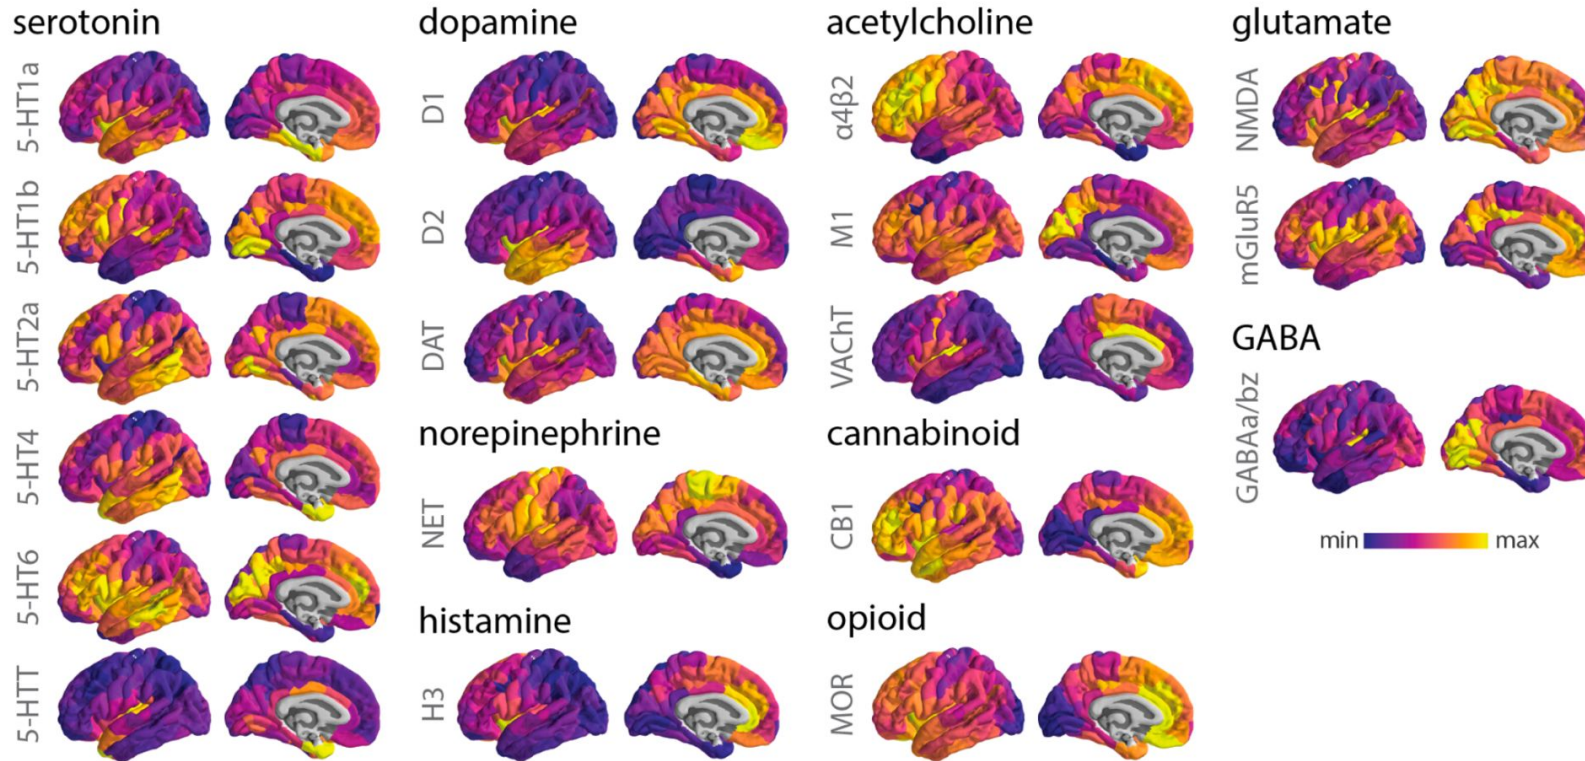

Figure 1. **PET images of neurotransmitter receptors and transporters** | PET tracer images were collated and averaged to produce mean receptor distribution maps of 19 different neurotransmitter receptors and transporters across 9 different neurotransmitter systems and a combined total of over 1 200 healthy participants.

Hansen et al. 2022, Nature Neuroscience

# Conclusion

- ❑ Together, these resources include molecular imaging data from over 30.000 participants, from more than 60 datasets.
- ❑ Data for a broad range of biological targets, including perfusion, glucose metabolism, different pre- and post-synaptic neurotransmitters, amyloid and tau pathology and neuroinflammation, are currently available
- ❑ While the majority of molecular imaging data are currently not publicly available, funding bodies increasingly require data to be shared openly
- ❑ The increased availability of open data will make molecular imaging research more inclusive and also produce better research
